Welcome to rePretty

Thank you for choosing the rePretty wireless red light therapy glove and wrist wrap.

At rePretty, our mission is to make high-quality red light wellness easier for more people to experience. We thoughtfully design products that feel natural, dependable, and simple to use—so they can become a comfortable part of everyday life without complicated equipment or difficult routines.

This glove combines red and near-infrared light with cordless convenience in a comfortable, wearable design for the hand and wrist. Whether you use it after repetitive tasks, physical activity, or during a quiet break, it is designed to fit naturally into your day and make self-care easier to maintain.

We hope this product becomes a trusted part of the way you care for yourself. Before using the glove, please read this manual carefully and keep it for future reference.

1. Product Overview

Product name: rePretty Arc H2 Wireless Red Light Therapy Wrist Wrap. This rechargeable, open-finger glove provides red light therapy for hands and wrists, combining red and near-infrared light with adjustable wrist support. Dimensions (laid flat): 11.8 × 9.1 inches. The integrated controller is positioned on the outer surface, while the LEDs face the skin.

Key Features

57 pcs 3-in-1 LEDs: Each LED combines two 660nm red-light chips and one 850nm near-infrared chip.

Durable Nylon Exterior: The abrasion-resistant nylon outer layer stands up to everyday wear and is easy to wipe clean.

Removable Ergonomic Wrist Support: The contoured, removable wrist splint helps keep the palm and wrist in a natural, supported position. Keep it in place for support or remove it for a more flexible fit.

Breathable Design: Breathable fabric helps reduce stuffiness during use.

Adjustable Wrist Wrap: Hook-and-loop straps secure the glove comfortably around the hand and wrist.

Cordless Convenience: A built-in rechargeable battery and integrated controller make this wireless red light glove easy to use without a power cable.

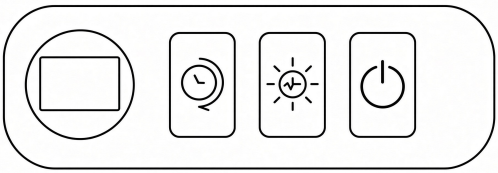

2. Package Contents

Check the package before first use. If an item is missing or damaged, please contact us.

Item	Qty.
Wireless Red Light Therapy Wrist Wrap	1
39.4-inch USB to USB-C charging cable	1
User Manual	1

The controller and adjustable wrist strap are integrated with the wrap.

3. Controller and Light Settings

Power Key

Press and hold the Power key for about 1 second to switch the wrap on or off. The wrap starts at L1 with a 15-minute timer. Two short beeps confirm power-on; one long beep confirms power-off. Use the Sun key to change the light setting.

Sun Key

Short-press the Sun key to cycle through L1 → L2 → L3 → H2 → H3 → L1. The wrap uses 660nm red light and 850nm near-infrared light simultaneously. L1, L2, and L3 are steady-light brightness levels; H2 and H3 are pulsed-light settings.

Clock Key

The timer starts at 15 minutes. Each short press changes it to 20, then 30, then 10 minutes. Further presses repeat the 20 → 30 → 10 cycle. The 15-minute setting is the start-up default and is not part of this repeating cycle. Each short press produces one beep.

Display

At start-up, the display shows L1, then changes to the 15-minute timer after about 2 seconds. The timer counts down during the session. Check the display to confirm your selected setting and session time. The wrap switches off automatically when the countdown ends.

Light Settings

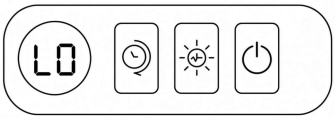

The display shows the selected light setting and session time.

Display	Light Mode	Light Button Indicator
L1	Steady Light — 20% Brightness	Red
L2	Steady Light — 50% Brightness	Orange
L3	Steady Light — Maximum Brightness	Blue
H2	Pulsed Light — 10 Hz	Cyan
H3	Pulsed Light — 40 Hz	Purple

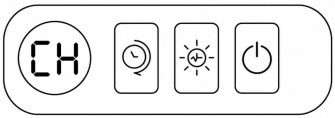

Battery and Charging Indicators

Charge only when the wrap is switched off and completely dry. Disconnect the USB cable before operating the wrap.

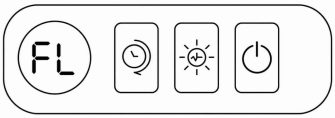

Low Battery: The display shows “LO,” and all button indicators flash red.

Charging Status: While charging, the display shows “CH,” and the three button indicator lights illuminate red in sequence, indicating that charging is in progress.

Fully Charged: The display shows “FL,” and all button indicators remain solid green.

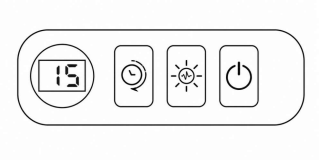

The session timer starts at 15 minutes. After adjustment, the timer cycles through 20, 30, and 10 minutes.

4. How to Use

Wear the wrap with the LED side facing your hand or wrist and the controller facing outward. Secure the wrist strap comfortably. Make sure the wrap is dry and the USB cable is disconnected before use.

1. Turn On

Press and hold the Power key for about 1 second. The wrap starts at L1 with a 15-minute timer.

2. Select a Light Setting

Short-press the Sun key to cycle through L1, L2, L3, H2, and H3. Check the display to confirm your selection.

3. Set the Timer

Keep the default 15-minute session, or press the Clock key to select 20, 30, or 10 minutes. Further presses repeat the 20 → 30 → 10 cycle.

4. Turn Off

Press and hold the Power key for about 1 second to switch off the wrap. The wrap also switches off automatically when the timer ends.

Recommended Settings and Session Times

Choose a starting point for the part of your hand or wrist that feels tired, stiff, or uncomfortable. Begin with L1 and a shorter session, then adjust to comfort.

Area and situation	Light setting	Session time	Practical guidance
First use or a more sensitive hand or wrist	L1 steady	10 min	Start low and check comfort before increasing the setting.
Wrist tension after typing or mouse use	L2 steady	15 min	Rest the hand naturally; keep the support in place if preferred.
Thumb-base or palm fatigue after phone use or gripping	L1 or L2 steady	10–15 min	Position the LED side toward the area within the wrap coverage.
Hand and wrist stiffness after repetitive tasks	L2 or L3 steady	15–20 min	Use L3 only after you are comfortable with a lower level.
Hand or wrist fatigue after exercise, racket sports, or cycling	H2 10 Hz or H3 40 Hz pulse	10–20 min	Use during a rest break with the hand clean, dry, and relaxed.
Everyday relaxation or a reading and TV break	L2 steady	15 min	Keep the default timer and leave the fingers comfortably free.
Bedtime use with palm and wrist support	L1 steady	10–15 min	Set the timer before sleep; the wrap switches off when it ends.

Timer selection: Keep 15 minutes at start-up, or press the Clock key to cycle through 20, 30, and 10 minutes. Do not exceed 30 minutes per session. The timer switches the wrap off automatically.

Keep the straps comfortable. Stop the session if you feel unusual heat, pain, burning, or persistent redness.

5. Cleaning Care and Storage

Switch off the wrap and disconnect the USB cable before cleaning.

Wipe the nylon exterior, controller, straps, and fabric gently with a soft, lint-free cloth. If necessary, use a small amount of mild disinfectant on the cloth only.

Never spray liquid directly onto the product. Do not soak, submerge, machine-wash, or dry-clean the wrap.

Do not use bleach, strong solvents, abrasive cleaners, or heat-generating cleaning products.

Allow the wrap to dry completely before charging, using, folding, or storing it.

Store in a cool, dry location, away from direct sunlight and heavy objects.

6. Technical Specifications

Item	Specification
Product name	Wireless Red Light Therapy Wrist Wrap
Model name	rePretty Arc H2
LEDs	57 pcs 3-in-1 LEDs
Wavelengths / configuration	2 × 660nm Red + 1 × 850nm Near-Infrared per LED
Light settings	L1 / L2 / L3 / H2 (pulse) / H3 (pulse)
Timer	15-minute start-up default; adjustable cycle: 20 → 30 → 10 minutes
Battery	1000 mAh built-in polymer rechargeable battery
USB charging cable	39.4-inch
Water resistance	IPX1 (normal perspiration only; not waterproof)
Net weight	Approx. 0.44 lb

8. Important Safety Information

Before and During Use

Inspect the wrap, controller, cable, charging connection, and LED surface before each use.

Use only on clean, dry, intact skin. Do not use over open or fresh wounds.

Begin with a lower intensity and a shorter session. Stop use if you feel pain, burning, persistent redness, or other discomfort.

Sleep use: You may sleep with a timed red light session enabled. The wrap switches off automatically when the timer ends and can remain in place for support.

Special Precautions

This product is designed primarily for adults. Children should use it under adult supervision. It is not recommended for infants or toddlers.

If you are pregnant, sensitive to light, taking medications that may increase light sensitivity, or currently receiving skin-related treatment, please consult your doctor before use.

Keep the product away from your eyes during use. Do not look directly at the LEDs or point or place the light-emitting surface near your eyes.

Electrical Temperature and Moisture Safety

Water Resistance: The wrap body is rated IPX1, meaning it is protected against vertically falling water drops under IPX1 test conditions. It is not waterproof. Keep the controller, cable, USB connector, and charging port dry. Do not immerse any part of the product or expose it to rain, splashing water, running water, or other liquids. Do not charge or operate the product with wet hands or on wet, damp, or water-soaked skin. The wrap may be used during normal perspiration; wipe it dry after use.

Do not use near heat sources or in areas with flammable or combustible products or vapors.

Do not disassemble, modify, or repair the product. Do not use it if it is damaged or abnormally hot.

9. Frequently Asked Questions

Product Features and Fit

Q01. What is rePretty Arc H2 designed for?

A: rePretty Arc H2 is a rechargeable wireless red light therapy wrist wrap for the hand and wrist. This red light therapy glove brings red and near-infrared light into a wearable design for use after repetitive tasks, physical activity, or during a quiet break. The controller is built into the wrap.

Q02. How is this red light therapy glove different from a basic red light wrap?

A: This wrap combines a cordless, hand-shaped design with an integrated controller, 57 pcs 3-in-1 LEDs, dual-wavelength light, three intensity levels, and three light modes: steady light, 10 Hz pulse, and 40 Hz pulse. It starts with a 15-minute timer, with adjustable 10-, 20-, and 30-minute sessions. Unlike a basic wrap that may require an external controller or restrict hand movement, the all-in-one design makes it easier to wear and use around the hand and wrist.

Q03. What is the benefit of a cordless red light therapy wrap?

A: Charge first, disconnect the USB cable, and enjoy a hands-free session without being tethered to a power outlet. Once charged, the wrap can be used while sitting, reading, watching TV, or relaxing at home. The integrated design also means fewer loose cables and separate components to manage.

Q04. Is Arc H2 a fingerless red light glove for the hand and wrist?

A: Yes. This fingerless glove uses an open-finger wrap design that covers the hand and wrist without enclosing all five fingers like a mitten. The adjustable straps hold the wrap in place while leaving the fingers free. Position the LED surface toward the intended hand-and-wrist area.

Product Features and Fit Continued

Q05. Can I use the same wrap on my right hand and left hand?

A: Arc H2 is designed primarily as a wrist brace for the right hand and can also be repositioned for the left hand. Reposition the wrap and adjust the hook-and-loop straps for the hand you are using, keeping the LED side toward the skin and the controller outward. Fit and coverage can differ between hands.

Q06. Does 57 three-in-one LEDs mean 57 light sources or 171 chips?

A: The wrap has 57 LED packages. Each package contains two 660nm red-light chips and one 850nm near-infrared chip. That gives 114 red-light chips plus 57 near-infrared chips, or 171 chips in total. The product specification of 57 LEDs refers to the packages, not to 171 separate LED packages.

Q07. Why combine 660nm red and 850nm near-infrared light therapy for hands?

A: The wrap combines visible 660nm red light with 850nm near-infrared light in each 3-in-1 LED. The two wavelengths provide complementary coverage for red light therapy for wrist and hand care.

Q08. How does the removable wrist splint support my palm and wrist?

A: The removable ergonomic palm support follows the palm and wrist to help maintain a natural, supported position. Keep it in place when you want more support, including bedtime wear, or remove it for a more flexible fit. The support works independently of the red light, so it can continue supporting your hand after a timed session ends.

People and Everyday Scenarios

Q09. How do I use red light therapy for wrist pain or fatigue after typing?

A: For wrist discomfort after typing or mouse use, use a work break or the end of your workday for a hand-and-wrist red light session. Rest the hand naturally, secure the wrap, and choose a comfortable setting. For repetitive hand use, the manual suggests L2 or L3 for 15–20 minutes; first-time users should begin with 10 minutes.

Q10. Can I use this wrist support after gaming or scrolling on a phone?

A: Put Arc H2 on during your break after a gaming or phone session, when you can relax the hand instead of continuing to grip a controller. The cordless design lets you sit away from a charging outlet, and the open-finger shape avoids enclosing the whole hand. Start with a comfortable light setting and a short session.

Q11. Can I use red light hand therapy after knitting, drawing, crafting, or playing an instrument?

A: Yes. Arc H2 fits a hand-care break after activities involving repeated fine movements or gripping. Use it after your craft or practice session, with the hand relaxed and the strap comfortably secured. The built-in controller and timer make it easy to set a session without holding a separate light panel.

Q12. When should I use this hand and wrist support after housework, gardening, or using hand tools?

A: Use it during a rest break after the task. Clean and dry the hand first, then put on the wrap with the LED surface toward the skin. Keep the controller and charging port dry. This gives you a set period of hand-and-wrist care without managing an external controller or power cable during the session.

People and Everyday Scenarios Continued

Q13. Can this red light wrist wrap fit into a routine after the gym, racket sports, or cycling?

A: Yes. Use the wrap while resting after your activity, once the hand is clean and dry. The manual includes H2 or H3 as pulsed-light options after physical activity. Choose the setting by comfort, begin with a shorter session if you are new to the product, and keep each session within 30 minutes.

Q14. Is Arc H2 intended for adults, including older adults, or for children?

A: Arc H2 is designed primarily for adults. Its integrated display and three buttons handle power, light settings, and timing. An adult user should be able to operate the controls and respond to discomfort. Children should use it only under adult supervision; it is not recommended for infants or toddlers.

Q15. Can I use the wrap while reading or watching TV?

A: Yes. A seated reading or TV break is a practical setting for Arc H2. Charge the wrap beforehand and disconnect the cable, then keep the hand in a natural, relaxed position. For everyday relaxation, the manual suggests L2 with the default 15-minute timer. Keep the strap comfortable and let the timer end the session automatically.

Q16. What should I check before choosing Arc H2 as a gift?

A: Check that the recipient wants a hand-and-wrist red light wrap, prefers a cordless design, and can use the controls comfortably. The adjustable, open-finger shape and removable support are useful features to consider. The package contains one wrap, a charging cable, and a manual; it is not a pair of red light therapy gloves.

Settings and Session Planning

Q17. How long should each session last?

A: Start with a 10- to 15-minute session. If it feels comfortable, you may gradually increase the duration, but do not exceed 30 minutes per session. Longer sessions are not always better; choose a duration that feels comfortable for you.

Q18. Which intensity should I choose for my first red light therapy session?

A: Start with L1, the lowest steady-light setting, and a 10-minute session. The wrap powers on at L1 with a 15-minute timer. To select 10 minutes from that default 15, press the Clock key through 20, then 30, then 10. Check the display before settling into the session.

Q19. Why can I see 15 minutes at start-up but only 10, 20, and 30 when changing the timer?

A: Fifteen minutes is the start-up default. Once you press the Clock key, the sequence is 20, then 30, then 10 minutes, and those three choices repeat. Fifteen is not part of that repeating cycle. For a default 15-minute session, keep the start-up timer unchanged.

Q20. Which button changes the light setting, and how do I turn the wrap off?

A: Use the Sun key to change the light setting. Each short press moves through L1, L2, L3, H2, and H3 before returning to L1. The Power key switches the wrap on or off when held for about 1 second. Two short beeps confirm power-on; one long beep confirms power-off.

Settings and Session Planning Continued

Q21. What is the difference between L1–L3, H2, and H3?

A: L1, L2, and L3 are steady-light settings at 20%, 50%, and maximum brightness. H2 is the 10 Hz pulsed-light setting, and H3 is the 40 Hz pulsed-light setting. These codes describe the light output setting. The wrap uses 660nm red and 850nm near-infrared light simultaneously.

Q22. Should I always choose L3, or can I stay at a lower brightness?

A: You can stay at a lower brightness. Start with L1 and choose a level that feels comfortable; L3 is not required for every session. For everyday relaxation, the manual suggests L2. For a session after repetitive hand use, L2 or L3 is an option once you are comfortable with the wrap.

Q23. Should I be able to see the 850nm near-infrared light?

A: No. The 850nm near-infrared component is outside normal human vision. The visible red glow comes from the 660nm chips. Visible brightness alone does not show how much near-infrared light is being emitted. If an area appears unexpectedly unlit or the wrap behaves abnormally, contact support rather than judging the device from the infrared component alone.

Q24. Can I use Arc H2 as a wrist brace for sleeping?

A: Yes. You can wear Arc H2 as a night wrist support while sleeping, with a timed red light session enabled for the hand and wrist. Start with L1 and 10 minutes, or keep the default 15-minute timer. The wrap switches off automatically when the session ends. Keep the fit comfortable and disconnect the charging cable before use.

Comfort Cleaning and Storage

Q25. Can I still move my hand while wearing this hand brace?

A: The flexible, cordless design allows comfortable positioning without a power cable attached during use. Keep the hand in a natural, relaxed position. Do not sharply bend the wrap, apply heavy pressure, or fold it over the controller or LED panel.

Q26. How should I adjust the straps on this wrist support brace?

A: Fasten the adjustable wrist straps comfortably so the wrap stays in position with the LED side toward the hand and wrist. The fit should not feel painful or restrict a natural hand position. Reposition or loosen the strap if it feels too tight, and confirm that the controller remains on the outside.

Q27. Should the LED side face bare skin or the outside of the wrap?

A: The LED side should face your clean, dry, intact hand or wrist, and the controller should face outward. Check the LED surface and charging port before use. Do not use the wrap over open or fresh wounds, on water-soaked skin, or while the charging cable is connected.

Q28. Is mild warmth normal?

A: Yes. Mild warmth may occur during operation. In internal testing, typical temperatures measured at the hand surface were approximately 93.2°F at L1, 95.0°F at L2, and 98.6°F at L3. Actual temperature may vary depending on room temperature, fit, session duration, and individual conditions. Stop use if the wrap feels uncomfortably hot or causes pain, burning, or persistent redness.

Comfort Cleaning and Storage Continued

Q29. Does Arc H2 include a separate heater or vibration massage?

A: No. Arc H2 focuses on red and near-infrared light, with three steady-light brightness levels and two pulsed-light settings. It does not include a separate heating element or vibration massage function. Mild warmth comes from the LEDs operating; the light settings are not heat or massage levels.

Q30. Can I wash the wrap?

A: No. The wrap contains electronic components and must not be soaked, machine-washed, or dry-cleaned. Switch it off, disconnect the charging cable, and wipe it gently with a soft, lint-free cloth. If necessary, apply a small amount of mild disinfectant to the cloth—not directly to the wrap.

Q31. How should I clean the inside after a session or normal perspiration?

A: Switch the wrap off and disconnect the cable. Gently wipe the skin-contact surface and fabric with a soft, lint-free cloth. If needed, apply a small amount of mild disinfectant to the cloth only. Keep liquid out of the controller and charging port, and let the wrap dry completely before charging, using, or storing it.

Q32. How should I store this infrared wrist wrap between sessions or pack it in a bag?

A: Switch it off, disconnect the cable, and let it dry completely. Store it in a cool, dry place away from direct sunlight and heavy objects. Avoid sharp folds and do not fold it over the controller or LED panel. When packing it, protect those parts from pressure.

Charging Troubleshooting and Support

Q33. What comes in the package, and is a USB power adapter included?

A: The package contains one wireless red light therapy wrist wrap, one 39.4-inch USB to USB-C charging cable, and one user manual. The controller and adjustable wrist strap are integrated with the wrap. A USB power adapter is not included.

Q34. How do I charge the wrap, and can I use it while plugged in?

A: Switch the wrap off and make sure it is completely dry before charging. Connect the supplied USB charging cable to the charging port. Charge first, then disconnect the USB cable before starting a session. The wrap is intended to operate cordlessly during use, not while connected to its charging cable.

Q35. What does LO on the display mean?

A: LO is the low-battery indication. All button indicators flash red at the same time. Switch the wrap off and charge it while it is dry. Once it is charged, disconnect the cable before operating the wrap again.

Q36. What does CH on the display mean?

A: CH indicates charging in progress. While charging, the three button indicator lights illuminate red in sequence. Keep the wrap switched off and dry during charging. CH is a charging status, not a light setting for a session.

Charging Troubleshooting and Support Continued

Q37. What does FL on the display mean?

A: FL indicates that the wrap is fully charged. All button indicators remain solid green. Disconnect the USB charging cable before using the wrap, then press and hold the Power key for about 1 second to switch it on.

Q38. What should I do if the wrap does not operate normally?

A: Switch off the wrap and stop using it. Check that it is charged, dry, undamaged, and disconnected from the USB cable. If the problem continues, contact Customer Support (listed above) and provide your Amazon order number, product-label information, and photos or video of the issue.

Q39. What should I do if the wrap feels too hot or my skin becomes uncomfortable?

A: Stop the session, switch the wrap off, and remove it if you feel unusual heat, pain, burning, persistent redness, or other discomfort. Do not keep using a wrap that is damaged or abnormally hot. Contact rePretty Customer Support if the device appears to be malfunctioning.

Q40. How can I contact rePretty for product, operation, or after-sales help?

A: Email support@re-pretty.com or visit re-pretty.com for product, operation, or after-sales help. For an operating issue, include your Amazon order number, product-label information, and clear photos or a short video so our support team can understand the problem.

Removable Support and Nylon Materials

Q41. How does the nylon exterior help with everyday use?

A: The abrasion-resistant nylon outer layer is designed for repeated daily wear. Its wipe-clean surface makes routine care straightforward after desk work, hobbies, or other activities. It protects the outside of the wrap without changing the red light settings or replacing the removable palm and wrist support.

Q42. How do I clean the nylon outer layer?

A: Switch the wrap off and disconnect the cable, then wipe the nylon exterior with a soft, lint-free cloth. Apply any mild disinfectant to the cloth rather than the wrap. Keep the controller and charging port dry. An easy-clean exterior does not make the complete electronic wrap machine-washable.

Q43. What material touches my skin?

A: The inner fabric uses an ice-silk mesh lining, paired with the skin-facing LED surface. The breathable design helps reduce stuffiness during wear. Put the wrap on clean, dry skin, keep the straps comfortable, and wipe the lining gently between sessions rather than soaking it.

Q44. When should I keep or remove the wrist splint?

A: Keep the contoured support in place when you want the palm and wrist held in a more supported position, such as during a rest break or sleep. Remove it when you prefer more flexibility. Adjust the straps again after changing the support so the fit stays comfortable.

Q45. Can I use Arc H2 as a wrist support without red light?

A: Yes. The ergonomic support does not need power. You can wear the wrap for support with the light switched off, or continue wearing it after a timed red light session ends. This lets you use the support and light functions separately, including during bedtime wear.
